

# Stock Management System

The stock maintenance system will allow the employees to record information of the items available in the store and generate reports based on the total amount of sales.

- The new system will have a software based desktop application interface to allow employees to enter the information of sales, purchase orders, change employee preferences and create reports.
- The system retains all the information of items in the inventor. The system retains the records of the cost, expiration date, vendor details, discount, quantity.
- The employee maintains the information of the sales of the item. He can add the item at the right time and update the database.
- The customer can view the availability of the required items and price of the items. The customer can just view them and cannot make any changes.

The process of stock maintenance system is that the customer logs in to the particular site to place orders for the product. The stock maintenance system is described sequentially through steps

- The customer logs into a particular site.
- They fill customer details.
- They place orders for their products.
- The vendor logs in and views the customer details and orders.
